

## ABSTRACT OF THE DISCLOSURE

The invention provides an electrochemical cell which includes a first electrode and a second electrode which is a counter electrode to said first electrode, and an electrolyte material interposed there between. The first electrode comprises an electrode active material represented by the general nominal formula  $A_a[M_m,MI_n,MII_o](XY_4)_dZ_e$ , wherein at least one of M, MI and MII is a redox active element,  $0 < m,n,o \leq 4$ , and  $\frac{1}{2}[V(MI) + V(MII)] = V(M)$ , wherein  $V(M)$  is the valence state of M,  $V(MI)$  is the valence state of MI, and  $V(MII)$  is the valence state of MII.
